(54) VOICE INTERPRETATION SYSTEM INSTALLED IN WIRELESS COMMUNICATION SYSTEM AND TERMINAL, AND USE METHOD THEREFOR

(57) Abstract:

PURPOSE: A voice interpretation system installed in a wireless communication system and a terminal, and a use method therefor are provided to perform a telephone call with a foreigner in real time by installing a voice interpretation program in the terminal included in a mobile communication system or the communication system of a mobile communication service company.

CONSTITUTION: An interpretation system is installed in a communication management system of a mobile communication company. After a communication terminal user applies to the mobile communication company for receiving a service, if the communication terminal user speaks over the mobile communication terminal, a communication service company interprets a voice and provides the interpreted result. A voice interpretation program is installed in the communication terminal for interpreting the voice in real time.
